

Logbook Entry 001: Protocol-Aware Black-Hole Claim Audit

Audit ID: BH-PROTOCOL-AUDIT-001

Protocol: HRSM executable proxy admission v6

Manifest SHA-256: f45c3679f4cb7fa16467b5a1990d81f4e79d2a95b0f6d759eece3e51b51ce699

Purpose

This entry adjudicates manuscript-facing claims before recoverability or memory coordinates are activated. It inventories frozen evidence, records numerical and construction caps, and prevents unsupported claims from entering the next manuscript revision.

Claim adjudication

Claim	Verdict	Allowed headline
BH-C01	allowed_bounded	A reduced black-hole projection is operational in the tested simulation and survey branches.
BH-C02	unresolved_axis_identity	Specific accretion rate is used provisionally as a forcing or throughput coordinate.
BH-C03	audit_required	S is an equilibrium-distance coordinate only where code, configuration, and equation use a concordant residual construction.
BH-C04	blocked_pending_dimensionality	The Tier 1 composite is exploratory until redundancy and noise-matched effective dimensionality are audited.
BH-C05	allowed_bounded	In the frozen TNG Tier 1 branch, residence-based ripeness has a negative dispersion slope under the declared estimators, subject to provenance, effective-unit, and construction-null caps.
BH-C06	rejected_negative_result	The ordinary-variance median-potential trend is tail dominated and fails robust re-estimation.
BH-C07	allowed_bounded	The GAMA D4000-offset branch is a directional, three-bin, resolution-limited observational analogue.
BH-C08	numeric_quarantine	The GAMA sigma-star construction is numerically quarantined pending clean reconstruction and target-side independence checks.
BH-C09	rejected_negative_result	MaNGA demonstrates survey-scale portability but refuses a universal compression law.
BH-C10	exploratory	The score is an exploratory contextual ranking whose component and rank stability can be audited.
BH-C11	interpretive_only	Extreme settlement outliers are candidates for independent merger and host-disturbance validation.
BH-C12	forbidden_not_attempted	Memory remains unactivated until a frozen generator ladder survives admitted finite augmentations and time-order nulls.
BH-C13	forbidden_not_attempted	Recoverability remains unactivated until an information-time-valid R predicts an independent later recovery event.
BH-C14	forbidden_not_attempted	The current evidence supports at most a reduced Tier 1 projection while R and M remain future tests.

Axis status

Axis	Candidate files	Verdict
H	64	identity_unresolved
R	2	candidate_only
S	162	formula_concordance_required
M	2	candidate_only

Outcome

allowed_bounded: 3; audit_required: 1; blocked_pending_dimensionality: 1; exploratory: 1; forbidden_not_attempted: 3; interpretive_only: 1; numeric_quarantine: 1; rejected_negative_result: 2; unresolved_axis_identity: 1.

Numeric quarantine flags requiring review: 65. The current branch remains a reduced Tier 1 projection. Recoverability and memory are not activated by this audit. The next stage may begin only after the configuration and manifest hashes are frozen and the blocked formula, provenance, effective-unit, and numerical items are resolved or explicitly carried as caps.
