

Logbook Entry 003: Tier 1 Validity Freeze Candidate

Run ID: BH-TIER1-VALIDITY-FREEZE-002

Manifest SHA-256: 7b7ee828586978206d6e8ac291da3d0dfffb703e3676f7a96d4c07c9c0dbe8f90

Purpose

This entry compares row, left-endpoint, and right-endpoint residence conventions before recoverability or memory generators are activated.

Formula concordance

Check	Verdict	Action
tng_stability	pass	none
gama_d4000_stability	pass	retain bounded only
gama_sigma_stability	fail_nonconcordant	quarantine branch and remove positive manuscript claim

Binding findings

Residence implementation mode: right_interval_time_weighted.

Irregular-cadence tracks: 395 of 400.

Tier 1 axis verdict: blocked_same_channel.

GAMA sigma verdict: quarantined_numeric_and_target_construction.

Dependence bridge verdict: no_explicit_bh_dependency_bridge.

Adjudication

The TNG ripeness association remains bounded. The GAMA sigma branch is quarantined. Occupancy is order-invariant and cannot itself activate memory. R and M fitting remain blocked until the validity remediations and dependence bridge are frozen.
